DATA SHEET

Trustwave Secure Email Gateway

▶ COMPLETE EMAIL PROTECTION AND CONTENT CONTROL

BENEFITS

- **Advanced Security**
  Gain industry leading protection against phishing, blended and targeted threats

- **Protect Against Data Loss**
  Ensure sensitive data is protected and meet stringent policy compliance requirements

- **Powerful Management Controls**
  Gain unmatched policy controls that empower you to easily manage your email needs and handle non-standard configurations

Protecting your organization's email environment against advanced malware and preventing loss of corporate intellectual property while managing complex compliance policies can be a daunting challenge. Trustwave Secure Email Gateway (SEG) achieves all this with a single solution that provides advanced protection against modern threats, unmatched policy configuration and in-depth data security and compliance management. Trustwave SEG provides complete email security, compliance and acceptable use controls for organizations of all sizes.

IT'S NOT JUST ABOUT SPAM

Despite new and emerging methods of communication, email remains the top communication tool for businesses. But, with nearly 20% of spam containing malicious links and attachments, traditional anti-spam technologies only provide partial protection. Targeted attacks that blend web and email payloads are responsible for some of the biggest security compromises. An effective email security defense requires an in-depth understanding of the web and modern cyberattack strategies

Trustwave SEG provides unmatched protection against these advanced threats. Backed by our elite security research team, SpiderLabs, Trustwave SEG incorporates industry leading web threat intelligence to effectively thwart emails that contain malicious URLs and deliver real-time, zero-day protection against the latest email-borne threats.

PROTECTION AGAINST DATA LOSS

Today's modern email security requires comprehensive data protection controls to keep confidential information from falling into the wrong hands—with Trustwave SEG you get just that. Trustwave SEG analyzes, manages and controls outbound content to provide full DLP level inspection on emails and attachments to effectively manage confidential data and help meet stringent regulatory requirements.
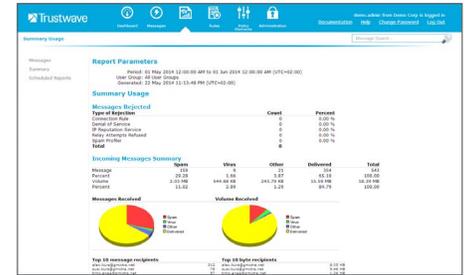

Trustwave SEG email encryption is an integrated, cloud-based encryption that provides your end users with a seamless experience that secures confidential communications, automatically triggered by DLP content inspection rules.

EXTENSIVE POLICY CONTROLS

Companies merge, email naming standards change, users require special email routing and HR policies surrounding email become more complex. These are a few examples of the unique requests being placed on today's email administrators. Trustwave SEG provides unmatched policy configuration flexibility with an advanced policy engine that allows for custom rules based on trigger points, content filtering and other policies at a highly detailed level.

EMAIL GOVERNANCE BEST PRACTICES

Putting content and DLP policies in place to secure your organization's confidential data is an important email governance best practice, but in so doing, it's also important to ensure you're not triggering false positives or inadvertently interrupting business operations. Trustwave SEG helps you perfect this effort with its monitoring only mode. Prior to rolling out new rules, monitoring lets you check the rule's effect on email flow to easily make any required adjustments before implementing more stringent quarantine policies.

FLEXIBLE DELIVERY OPTIONS

Trustwave SEG gives you protection the way you want it. Whether you are looking for the granularity and onsite control of an on-premise solution (software or virtual appliance) or the same powerful features with the appeal of the cloud (SaaS or private cloud model), Trustwave empowers you to choose the flexible and high performance deployment option that best fits your needs.
